UNIFY – cross-tool change assurance
Select change for verification (repo, base/head, linked artifacts)
View criterion-level evidence case
Export audit evidence
Confirm / reject cross-tool link
Acknowledge / resolve / suppress / reopen finding
Review requirement–code divergence (P4)
Receive role-routed notification
Approve structured design constraint
Approve pre-filled workflow configuration
Connect repository and view eligibility score
«extend»
Inspect bounded verification passes
Ingest and reconcile tool events
«extend»
Dispute verdict (logged as labelled correction)
Code reviewer / technical lead (primary)
Developer
Designer
Product owner / PM
«system» GitHub
«system» Jira
«system» Figma
«system» Slack (delivery only)
Link confirmation is routed to the code owner/assignee, not the PM (§23.1). Configuration is proposed by the system from observed transitions; the PM only approves it. Slack never feeds reasoning.
